

10% We're Going Above and Beyond!

Wade Towers and Antennas always offer you the best price, unrivalled quality and outstanding service and support.
For WISPAmerica, Wade and WAV, INC. are going above and beyond to offer you 10% off these roof mounts!

Non-Penetrating Roof Mounts

Designed for wireless internet providers, municipalities' wireless networks, two-way radio communications, schools, and many more installations.

The rigid construction of the pre-galvanized steel frame means they last longer and withstand even the harshest weather.

The frame of the NPRM accommodates both cinder blocks and patio stones, so your antenna stays secured without the need of anchoring the mount to the roof surface.

Tripod and Bipod Roof Mounts

Engineered for maximum strength, stability and durability. Made with 1¼" (3.2 cm) galvanized welded steel tubing, with interior/exterior galvanized steel coating to prevent corrosion.

These heavy-duty mounts accept up to 1¾ (4.4 cm) mast and feature a swing-away mast support. On-site installation is quick and easy.

Wind load test results are available for TRM-3 and TRM-5.

ORDERS MUST BE PLACED NO LATER THAN **MARCH 31, 2017!**
